

Incident Response Plan Testing

It's time to start testing your Incident Response Plans. As a result of our Cyber Risk Assessment visits, we see a number of our members that have Incident Response Plans in place yet haven't tested them. Annual testing of plans is recommended. We can help.

Incident Response Plan Table-Top Exercises

Tailored to your organization's specific needs and performed on-site at your location, a TCRMF Cyber Risk Services Advisor can develop a table-top exercise to test and discover gaps in your organization's Incident Response Plan. The ability to test and make changes to current plans before an incident occurs is an essential part of a Cyber Security framework. The preparation and testing should involve all key members of an organization.

IRP Testing Outline

After scheduling an Incident Response Plan Testing visit, the TCRMF Cyber Risk Services Advisor will create a series of cyber-attack scenarios (Account Compromise, Ransomware, Double-Extortion Ransomware, etc.) that the member's IRP team will collaborate on using their currently developed Incident Response Plan. Gaps in documentation or assignments will be reviewed and a plan of action for filling the gaps will be decided.

To schedule an Incident Response Testing visit contact:

Lee Cain, Cyber Risk Services Advisor
